SUMM This invention relates to dentifrice compositions which contain an **antibacterial** agent which is effective in promoting oral hygiene, such as by reducing dental plaque, improving gingival conditions and reducing formation. . .

SUMM . . . with certain of its aspects, this invention relates of preparing a dentifrice composition comprising a non-toxic insolubilized 1,6-di-(p-chlorophenyl biguanido) hexane **antibacterial** agent in amount corresponding to about 0.01-5% by weight of the free base thereof and a dentifrice vehicle in which. . .

SUMM . . . acceptable and compatible with an oral composition such as a dentifrice or a mouthwash. Indeed, a soluble form of the **antibacterial** agent may react with an additional component of an oral composition such as sodium monofluorophosphate or sodium N-lauroyl sarcosinate to. . .

SUMM The insolubilized **antibacterial** agent is used in the oral composition in amount corresponding to 0.01-5% by weight, preferably 0.05-1%, based on the free base form of the **antibacterial** agent.

SUMM . . . salt thereof to form the water-insoluble polymer. It is noted that at about pH 10, the free base of the **antibacterial** agent is insoluble and is, therefore, when in such state, included within the scope of the oral compositions of this. . .

SUMM . . . microns and has a specific gravity of 2.42, is a particularly desirable polishing agent in dentifrice compositions containing the insolubilized **antibacterial** agent, and particularly the insolubilized disarcosinate of 1,6-di-(p-chlorophenyl biguanido) hexane. When visually clear gels are employed, a polishing agent of. . .

SUMM . . . to carbohydrate breakdown in addition to exerting some reduction in the solubility of tooth enamel in acid solutions. Furthermore, the **antibacterial** agent and the sarcosinate can react in situ to form desirable insoluble salts in accordance with the invention.

SUMM . . . highly effective in preventing brown staining of dental enamel and possess substantially no bitter taste. These salts also effectively provide **antibacterial** effect to the dentifrice compositions. Cationic surface active germicides and **antibacterial** compounds such as di-isobutylphenoxyethoxyethyl dimethyl benzyl ammonium chloride, benzyl dimethyl stearyl ammonium chloride, tertiary amines, having one fatty alkyl group. . .

SUMM The insolubilized **antibacterial** agents employed in accordance with this invention do not impart a bitter or undesirable taste to oral compositions. The taste. . .

SUMM . . . the water soluble fluorine content thereof. Potassium hexafluorozirconate, sodium hexafluorostannate and sodium monofluorophosphate can form insoluble polymeric salts with the **antibacterial** agent in situ in the dentifrice composition and still be present in excess. Sodium fluoride, stannous fluoride and sodium monofluorophosphate. . .

SUMM Additional **antibacterial** agents may also be employed in the oral preparations of the instant invention to provide a total content of such agents of up to about 5% by weight. Typical **antibacterial** agents include

SUMM N.sup.1 -(4-chlorobenzyl)-N.sup.5 -(2,4-dichlorobenzyl) **biguanide**;

SUMM 4-chlorobenzhydryl **biguanide**;

PI US 4051234 19770927 <--

AB Oral compositions such as toothpastes, mouthwashes and the like containing a particular substantive bis-**biguanide** compound which inhibits the formation of plaque and caries, and a specific amino

carboxylate compound which inhibits the tendency of the bis-**biguanide** compound to produce a stain on oral surfaces, preferably while maintaining the bis-**biguanide** as a water-soluble salt.

SUMM The bis-**biguanide** compounds of this invention are known, having been disclosed in U.S. Pat. No. 2,684,924, Rose et al., patented July 27, . . .

SUMM Attempts have been made in the prior art to reduce the tooth-staining tendency of bis-**biguanide** antiplaque agents. For example Haefele, U.S. Pat. No. 3,934,002 issued Jan. 20, 1976 and Haefele's pending U.S. pat. application Ser. No. 635,030, filed Nov. 25, 1975, relate to the formation of insoluble bis-**biguanide** salts to reduce staining of teeth. Such insoluble materials are not, however, very useful in formulating clear liquid oral products. . .

SUMM . . . compositions since some chelators have a tendency to damage dental enamel. There is thus a continuing need for reduced staining bis-**biguanide** compositions which contain soluble materials and which do not contain chelating agents that are potentially damaging to teeth.

SUMM It has now been discovered that if the specific bis-**biguanide** compounds disclosed herein and the specific amino carboxylate compounds disclosed herein are used together in the oral cavity in the . . . and the compounds either being used together or sequentially, the stain that is normally caused by continuous use of the bis-**biguanide** compounds alone is effectively reduced. It is preferred that the amino carboxylate compound and the bis-**biguanide** compound be used together.

SUMM The bis-**biguanide** compounds of this invention have the generic formula: ##STR1## wherein A and A' each represent either (1) a phenyl radical. . .

SUMM . . . are those having a solubility in 25.degree. C. water equal to or greater than about 0.04%. Specific examples of these bis-**biguanide** compounds are disclosed hereinafter. pg,6

SUMM . . . oral surfaces which is resistant to removal by ordinary brushing with conventional dentifrices. This stain problem prevents compositions containing these bis-**biguanide** compounds from being accepted by the consumer. The bis-**biguanide** compounds are normally used in amounts of from about 0.01% to about 2.5% by weight of the composition, preferably from. . . or greater amounts may be used. In general, all that is required is to have an effective amount of the bis-**biguanide** salt in the mouth sufficient to give antiplaque and/or anticaries effectiveness.

SUMM . . . specific amino carboxylate compounds which have been found to be effective in preventing stain, but which do not precipitate the bis-**biguanide** compound are ethylenediaminediacetic acid (EDDA) and its pharmaceutically acceptable water-soluble salts (i.e., salts being soluble to the extent of equal. . . Haefele, U.S. Pat. No. 3,937,807, issued Feb. 10, 1976. Similar amino carboxylates, including ethylenediaminetetraacetic acid and iminodiacetic acid, precipitate the bis-**biguanide** compound and are very damaging to tooth enamel.

SUMM . . . of the oral compositions of the present invention, it is to be understood that the chelator compounds react with the bis-**biguanide** compounds in the ratio of two moles of chelator to one mole of bisbiguanide compound. Enough chelator should be present. . . compositions herein such that some excess chelator is present in addition to that which reacts or would react with the bis-**biguanide** present. The concentration of such excess chelator generally ranges from about 0.01% to 1.25%, preferably from about 0.1% to about. . .

SUMM In addition to the essential bis-**biguanide** and chelator components of the oral compositions of this invention as described in the foregoing, such compositions can also contain. . .

SUMM . . . the present invention are dentifrice compositions, especially

toothpastes. Dentifrices preferably contain from about 0.1% to 2.0% by weight of the bis-**biguanide** component and from about 0.1% to 1.25% by weight of the composition of the chelator in excess of that which reacts with the bis-**biguanide**. Dentifrices also contain an abrasive polishing material and typically also contain sudsing agents, flavoring agents and sweetening agents. Toothpaste compositions.

SUMM . . . those which are reasonably stable and form suds throughout a wide pH range, and which will not react with the bis-**biguanide** compound, i.e., non-soap nonionic, cationic, zwitterionic and amphoteric organic synthetic detergents.

SUMM . . . such as saccharin and 0% to 0.3% (preferably 0.05% to 0.3%) flavoring agent, and the balance water. The amount of bis-**biguanide** antibacterial agent in mouthwashes is typically from about 0.01% to about 1.2% by weight.

SUMM . . . 3,934,002, issued Jan. 20, 1976. This patent is incorporated herein by reference. However, if a solution is desired containing water-soluble bis-**biguanide** salt, then the phosphorus-containing anticalculus agent should not be used since it will form an insoluble salt with the bis-**biguanide** compound.

SUMM . . . desired reduction is an effective amount. Generally, an amount which supplies at least about 0.001 g. per usage of the bis-**biguanide** compound is effective. Composition components can be utilized in the instant method in sequential fashion instead of as single homogenous. . .

DETD When in the above examples, the following bis-**biguanide** compounds are substituted, either wholly or in part (50%) for the preferred chlorhexidine digluconate, substantially equivalent results are obtained in that plaque, calculus, caries and gingivitis are inhibited with reduced staining as compared to the use of the bis-**biguanide** compounds alone: 1,6-bis-(3-ethylhexylbiguanido)hexane dihydrochloride; 1,6-di-(N<sup>sup.5</sup>-phenyl-N<sup>sub.1</sup>-diguanido)hexane tetrahydrochloride; 1,6-di-(N<sup>sub.5</sup>-phenyl-N<sup>sub.5</sup>-methyl-N<sup>sup.1</sup>-diguanido)hexane dihydrochloride; 1,6-di-(N<sup>sup.5</sup>-o-chlorophenyl-N<sup>sup.1</sup>-diguanido)hexane dihydrochloride; 1,6-di-(N<sup>sup.5</sup>-2,6-dichlorophenyl-N<sup>sup.1</sup>-diguanido)-hexane dihydrochloride; . . . -p-chlorophenyl-N<sup>sup.1</sup>-diguanido) dodecane dihydrochloride; 1,10-di-(N<sup>sup.5</sup>-phenyl-N<sup>sup.1</sup>-diguanido) decane tetrahydrochloride; 1,12-di-(N<sup>sup.5</sup>-phenyl-N<sup>sup.1</sup>-diguanido) dodecane tetrahydrochloride; 1,6-di-(N<sup>sup.5</sup>-p-chlorophenyl-N<sup>sup.1</sup>-diguanido)hexane tetrahydrochloride; ethylene bis(1-tolyl **biguanide**); ethylene bis(p-tolyl **biguanide**); ethylene bis(3,5-dimethylphenyl **biguanide**); ethylene bis(p-tert-amylphenyl **biguanide**); ethylene bis(nonylphenyl **biguanide**); ethylene bis(phenyl **biguanide**); ethylene bis(N-butylphenyl **biguanide**); ethylene bis(2,5-diethoxyphenyl **biguanide**); ethylene bis(2,4-dimethylphenyl **biguanide**); ethylene bis(o-diphenyl **biguanide**); ethylene bis(mixed amyl naphthyl **biguanide**); N-butyl ethylene bis(phenyl **biguanide**); trimethylene bis(o-tolyl **biguanide**); N-butyl trimethylene bis(phenyl **biguanide**); tetramethylene bis(1-tolyl **biguanide**); the specific compounds disclosed in U.S. Pat. No. 2,863,919, Burtwell et al., Dec. 9, 1958), said patent being incorporated herein. . . cinnamates; thiocyanates; arginates; pyromellitates; tetracarboxybutyrates; benzoates; glutarates; monofluorophosphates; perfluoropropionates; and the salts prepared by reacting the following salts with the bis-**biguanide** compounds: Disodium ethane-1-hydroxy-1,1-diphosphonate; disodium salt of ethane-1,2-dicarboxy-1,2-diphosphonic acid; dipotassium salt of ethane-1,2-dicarboxy-1,2-dihydroxy-1,2-diphosphonic acid; the monocalcium salt of ethene-1,2-dicarboxy-1-phosphonic acid; the. . .

CLM

What is claimed is:

1. An oral composition effective in inhibiting bis-**biguanide** tooth staining and the formation of plaque, caries and calculus comprising a carrier suitable for use in the oral cavity and A. from about 0.01% to about 2.5% by weight of a tooth staining bis-**biguanide** compound, otherwise tending to produce a rather offensive brown tooth stain upon continuous oral use and having the generic formula: . . . by weight of the composition of a chelator in excess of the amount of chelator which will react with the bis-**biguanide** compounds, and which in said concentration range effectively reduces said bis-**biguanide** tooth stain without precipitating said tooth-staining bis-**biguanide**, said chelator being an amino carboxylate compound selected from the group consisting of: Ethylene-diaminediacetic acid and the water-soluble pharmaceutically acceptable. . . .
2. The composition of claim 1 wherein the bis-**biguanide** compound is a water-soluble salt and the ethylenediaminediacetic acid or salt thereof is symmetrical.
5. The composition of claim 2 containing from about 0.05% to about 1.2% by weight of the bis-**biguanide** compound and from about 0.1% to about 1% by weight of the amino carboxylate compound.
6. The composition of claim 2 wherein the bis-**biguanide** compound is [1,6-di-(N.<sup>sup.5</sup> -p-chlorophenyl-N.<sup>sup.1</sup> -di-guanido)hexane] digluconate.
7. The composition of claim 2 wherein the bis-**biguanide** compound is present as a pharmaceutically acceptable salt selected from the group consisting of the hydrochloride, acetate, and gluconate salts. . . .
10. The composition of claim 2 in the form of a dentifrice A. wherein the bis-**biguanide** compound comprises from about 0.1% to 2.0% by weight of the composition; and B. wherein the carrier component comprises an. . . .
12. The composition of claim 11 wherein the bis-**biguanide** is [1,6-di-(N.<sup>sup.5</sup> -p-chlorophenyl-N.<sup>sup.1</sup> -diguanido)hexane].
13. The composition of claim 2 in the form of a mouthwash wherein the bis-**biguanide** component comprises from about 0.01% to 1.2% by weight of the composition and wherein the carrier component comprises water and. . . .
14. The composition of claim 13 wherein the bis-**biguanide** is [1,6-di-(N.<sup>sup.5</sup> -p-chlorophenyl-N.<sup>sup.1</sup> -diguanido)hexane].
15. The process of inhibiting bis-**biguanide** tooth-staining and dental plaque and caries, comprising the steps of: A. contacting the oral cavity with an effective amount of. . . . carrier suitable for use in the oral cavity, and from about 0.01% to about 2.5% by weight of a tooth-staining bis-**biguanide** compound, otherwise tending to produce a rather offensive brown tooth stain upon continuous oral use, and having a generic formula: . . . weight of the combined compositions of a chelator in excess of the amount of chelator which will react with the bis-**biguanide** compounds of Step A, and which in said concentration range effectively reduces said bis-**biguanide** tooth stain without precipitating said tooth-staining bis-**biguanide**, said chelator being an amino carboxylate compound selected from the group consisting of: Ethylenediaminediacetic acid, and the water-soluble pharmaceutically acceptable. . . .
16. A process of inhibiting bis-**biguanide** tooth-staining and dental plaque and caries comprising the step of contacting the oral cavity with an effective amount of a. . . . suitable for use in the

oral cavity; and A. from about 0.01% to about 2.5% by weight of a tooth-staining bis-**biguanide** compound, otherwise tending to produce a rather offensive brown tooth stain upon continuous oral use, and having the generic formula:. . . by weight of the composition of a chelator in excess of the amount of chelator which will react with the bis-**biguanide** compounds, and which in said concentration range effectively reduces said bis-**biguanide** tooth stain without precipitating said tooth-staining bis-**biguanide**, said chelator being an amino carboxylate compound selected from the group consisting of: Ethylene-diaminediacetic acid, and the water-soluble pharmaceutically acceptable. . .

17. The process of claim 16 wherein the bis-**biguanide** compound is a water-soluble salt of 1,6-di-(N.sup.5 -p-chlorophenyl-N.sup.1 -diguanido)hexane.

19. An oral composition effective in inhibiting bis-**biguanide** tooth staining and the formation of plaque, caries and calculus comprising a carrier suitable for use in the oral cavity and A. from about 0.01% to about 2.5% by weight of a tooth staining bis-**biguanide** compound, otherwise tending to produce a rather offensive brown tooth stain upon continuous oral use and having the generic formula:. . . chelator which in said concentration range is present in excess of the amount of chelator which will react with the bis-**biguanide** and which effectively reduces said bis-**biguanide** tooth stain without precipitating said tooth-staining bis-**biguanide**, said chelator being an amino carboxylate compound selected from the group consisting of: Ethylene-diaminediacetic acid and the water-soluble pharmaceutically acceptable. . .

20. A composition in accordance with claim 19 wherein the bis-**biguanide** is a water-soluble chlorhexidine salt.

DETD . . . cetylpyridinium chloride, dodecyltrimethylammonium bromide, decylmorpholinium sulfate, and the like, are suitable for use as the antimicrobial agent herein. Likewise, halogenated antibacterial agents such as 3,5,4'-tribromosalicylanilide, bis-(3,5,6-trichloro-2-hydroxyphenyl)methane, bis-(3,5-dichloro-2-hydroxyphenyl) sulfide, 3-trifluoromethyl-4,4'-dichlorocarbanilide, and mixtures thereof, can be used in conjunction with the compositions herein. . . to enhance their penetration into and through animal tissue. Another class of antimicrobial agents are the well-known alkyl or aryl bis-biguanide compounds. Such materials are commercially available. Also suitable herein are the salts, e.g., acetate, gluconate, hydrochloride, etc., of the foregoing bis-biguanides. Exemplary bis-biguanides suitable for use herein are 1,1'-hexamethylenebis [5'-(p-chlorophenyl)]biguanide and the acetate and gluconate salts thereof, and 1,1'-hexamethylenebis [5-(2-ethylhexyl)]biguanide and the acetate and gluconate salts thereof. A number of other suitable synthetic anti-bacterial agents are described in U.S. Pat. . . .

DETD . . . of epi-tetracycline hydrochloride and tetracycline hydrochloride (formed on dissolution of tetracycline hydrochloride in water), 3,5,4'-tribromosalicylanilide, bis-(3,5,6-trichloro-2-hydroxyphenyl)-methane, bis-(3,5-dichloro-2hydroxyphenyl) sulfide, 3-trifluoromethyl-4,4'-dichlorocarbanilide, 1,1'-hexamethylenebis-[5'-(p-chlorophenyl)]biguanide, 1,1'-hexamethylenebis [5'-(2-ethylhexyl)]biguanide, cetylpyridinium chloride, zinc undecylenate, oxytetracycline, terramycin, gramicidin, aureomycin, neomycin, tyrothricin, sulfonilamide, penicillin and zinc pyridinethione-1-oxide. Especially preferred antimicrobial agents herein. . .

DETD . . . tetracycline hydrochloride, an equilibrium mixture of tetracycline hydrochloride and epi-tetracycline hydrochloride, 3,5,4,'-tribromosalicylanilide, bis-(3,5,6-trichloro-2-hydroxyphenyl) methane, bis-(3,5-dichloro-2-hydroxyphenyl) sulfide, 3-trifluoromethyl-4,4'-dichlorocarbanilide, 1,1'-hexamethylene bis [5'(p-chlorophenyl) ]biguanide, 1,1'-hexamethylene bis

[5'-(2-ethylhexyl)]**biguanide**, cetylpyridinium chloride, zinc undecylenate, oxytetracycline, terramycin, gramicidin, aureomycin, neomycin, tyrothricin, sulfonilamide, and zinc pyridinethione-1-oxide, respectively, and equivalent results are secured.
